

Circular Economy and Sustainability Management Seasonal School

24-28 October 2022

The main target of the Circular Economy and Sustainability Management (CESM) seasonal school is represented by students from different backgrounds interested in the field of efficient resource management and circular economy. The CESM course explores organizational aspects and innovation facets related to all phases of the product life cycle; moreover, it provides practical overview of how processes, decisions and business models should change in light of the new circular economy paradigm. In more detail, the CESM seasonal school consists of training modules on issues such as: circular economy assessment, circular design, strategy development & business models, communication, etc. Finally, a laboratory will be scheduled to apply what students have learned in all previous lessons. Therefore, the training objectives of CESM encompass: helping participants to acquire a framework of useful skills to seize the opportunities in the economic shift; managing the challenges and transformation processes in a circular logic in order to encourage the practical application of the knowledge gained.
